Mervin – 2/11/26 gave feedback contributed scores to the leaderboard

Found a bug that cut of score popup at end of a level.

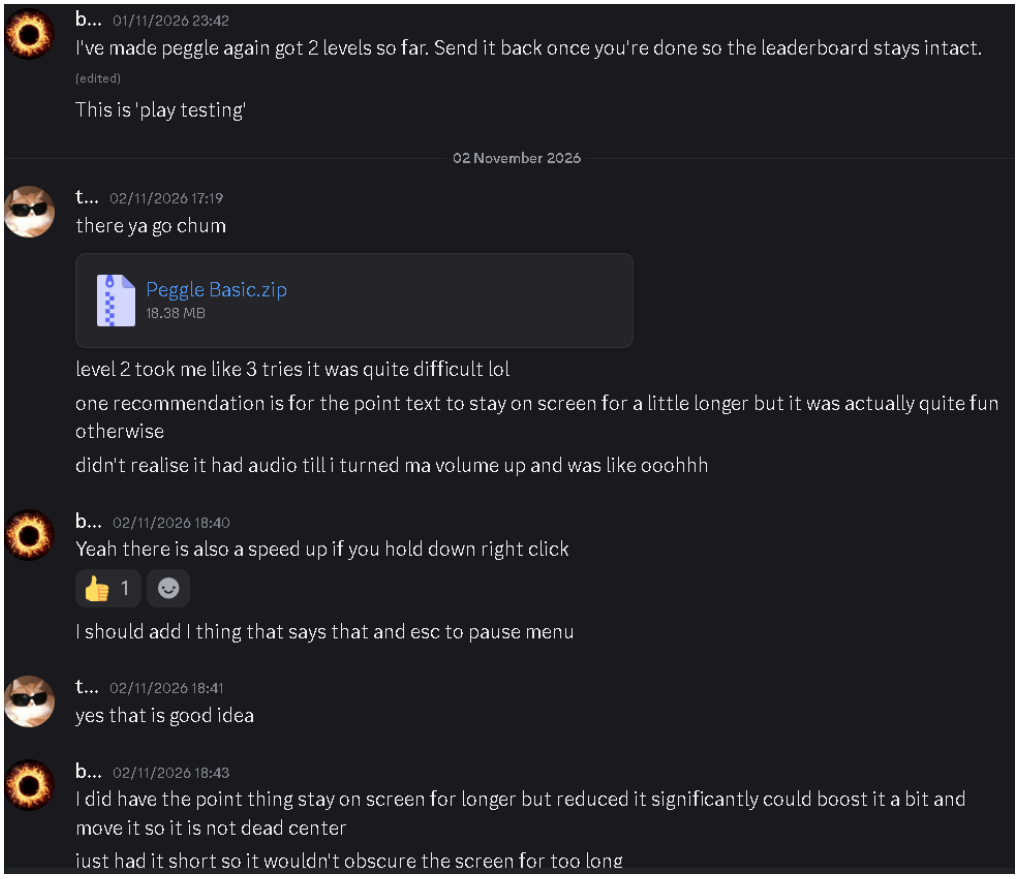

Gave me an idea for an audio slider.

Add a challenge mode where shots are the same over the 10 levels. *

The above gave me an idea to make a leaderboard that has a total score for beating 10 levels in a row, separate this into no retries and retries used. *

Implemented all of these ideas

Also brought to my attention the fact that my GitHub said only 10.1% of the code was C++, but this was due to me including the entire project on GitHub which contained SDL. After noting this a quick fix was to make a .gitattributes file.

Harry – 3/11/26 In person gave feedback

Add button mashing/skill check to roulette

Add popping animation to pegs disappearing*

More volume control, sliders for different volume sources

List of all the style shot*

I implemented the 2 with * after them

Dylan – 4/11/26 Played the game and contributed scores to the leaderboard

Thought I was hacked because his PC was treating the exe as suspicious. Due to the loose DLLs from SDL.
